Mulyorejo, Surabaya, East Java, Indonesia

Passionate 3rd-year Informatics student specializing in backend architecture and artificial intelligence engineering. Highly adaptive learner dedicated to mastering modern technologies, building scalable systems, and integrating intelligent models into production.

Academics

Sepuluh Nopember Institute of Technology (ITS) – Surabaya
Bachelor in Informatics Engineering, Current CGPA: 3.51/4.00

2024 – 2028 (expected)

Projects

AI-Powered Customs Automation (OCR for CEISA 4.0) | Python, FastAPI, Next.js, OpenCV, Docling, LayoutLMv3, Table Transformer, Ollama, XGBoost | [Code](#)

- **National Semifinalist:** Selected as a semifinalist in the AI Open Innovation Challenge 2026, an initiative by the Coordinating Ministry for Economic Affairs of the Republic of Indonesia, organized by President University.
- Engineered an end-to-end intelligent document processing pipeline to automate Indonesian customs declarations (PIB/PEB) for Cikarang Dryport.
- Integrated LayoutLMv3 for spatial semantic field classification and Table Transformer to accurately extract complex, multi-column itemized tables from low-quality scanned trade documents. Designed a schema-enforced LLM layer using Ollama and Pydantic to map extracted data into fully compliant, nested CEISA 4.0 JSON payloads.
- Implemented a validation engine featuring cross-document reconciliation, an XGBoost risk-scoring model with SHAP explanations, and an LLM-driven HS Code AI Predictor to flag compliance anomalies proactively.

Bill Splitter | Python, FastAPI, React, PostgreSQL, Redis | [Code](#)

- Integrated Gemini Vision API via google-genai SDK to parse multi-currency receipt images into structured JSON.
- Engineered a Deterministic Calculation Engine using Pydantic v2 to intercept AI responses, eliminating LLM mathematical hallucinations by routing financial logic through an exact backend service.

Community Service Project – Web Development for TK Tunas Pertiwi | [Google Sites](#)

- Designed and developed the school's website using Google Sites as part of a university community service project.
- Created and organized content highlighting school activities, facilities, programs, and contact information.
- Collaborated with school representatives to gather requirements and ensure the website met the school's needs.

Skills

Languages: Python, GO, Java, C++, C, Javascript, HTML, CSS, SQL

Frameworks & Libraries: FastAPI, React, Next.js, Gin

Tools & Platforms: Docker, Redis, MySQL, PostgreSQL, Supabase, Git, Vercel, Leapcell, Railway, MongoDB

Certification

- **TryHackMe Pre-Security Learning Path:** Completed foundational training covering core cybersecurity concepts, including networking fundamentals, web system security, Linux/Windows operating systems, and basic defensive security.
- **Dicoding “Belajar Machine Learning untuk Pemula”:** Completed a beginner machine learning course, building, evaluating, and optimizing core classification, regression, and clustering models with hyperparameter tuning.
- **Dicoding “Belajar Dasar Cloud dan Gen AI di AWS”:** Completed a foundational cloud computing course covering AWS global infrastructure, core services, pricing models, and Generative AI basics.
